

SUPPLY CHAIN CONTROL TOWER

Dashboard 5 — Real-time-style command center for risk, service, cost and intervention priorities

Control Tower Layer

Built from Digital Twin simulation outputs

NETWORK HEALTH

53%

service + criticality

SYSTEM RISK

HIGH

scenario exposure

SERVICE LEVEL

37.42%

near-critical policy

EXPECTED COST

\$8.23B

near-critical policy

CRITICAL NODES

10

critical/overloaded

RECOMMENDED POLICY

Near-Critical

best benchmark

Operational Network Map

Node color = risk regime, node size = network criticality.

Live Risk Alerts

Highest-priority nodes and policy recommendation.

1. WAR_012
